SUMMARY

Data Analyst with a Computer Science degree and a software engineering background. At Premier Analytics I built Dataverse databases and Python workflows that consolidated records across business units with zero data loss, and wrote validation scripts that kept duplicate and malformed entries out of the data. Since 2023 I have also prepared and quality-checked AI training data: transcribing and labelling speech, masking personal information to GDPR and HIPAA standards, and scoring LLM output against rubrics. I work in Python, SQL and Excel, and I make sure the data is right before drawing conclusions from it.

EXPERIENCE

Software Engineering Intern Apr 2025 – Jul 2026
Premier Analytics · Nairobi, Kenya

- Built information management portals and Dataverse databases on Microsoft Power Platform, bringing records from several departments into structured relational tables.
- Wrote Python data operations and automated workflows that consolidated information across business units with zero data loss.
- Designed input validation rules and error-checking scripts that stopped duplicate and malformed entries before they reached the database.
- Worked with project supervisors to replace paper and spreadsheet processes with digital forms, automated status alerts and reporting dashboards.
- Ran schema validations, quality checks and error audits in sandbox environments before each production rollout.
- Set up role-based access and row-level security with Entra ID to protect sensitive records.
- Supported more than 40 staff with system access, portal troubleshooting and written user guides.

AI Data Annotation & Speech Specialist (Freelance) Jan 2023 – Present
Upwork · Remote

- Transcribe multi-speaker and noisy call-centre audio into clean, structured text that follows strict formatting standards.
- Align speaker turns to millisecond timestamps, mark overlapping speech and tag non-verbal events such as crosstalk and background noise.
- Identify and mask personal information (names, phone numbers, financial and medical details) across text and audio, in line with GDPR and HIPAA.
- Rank AI-generated responses for LLM fine-tuning on accuracy, reasoning, safety and instruction following, and label intents, entities and sentiment in multi-turn conversations.
- Record bilingual English–Swahili conversational speech for banking, healthcare, customer service and technical support datasets.

ICT Support Technician & Systems Consultant (Part-time) Jan 2023 – Mar 2025
Small business and individual clients · Nairobi & Kiambu, Kenya

- Set up and repaired hardware, Ubuntu and Windows systems, and local networks (routers, DHCP, Ethernet, Wi-Fi repeaters).
- Created local and external backup routines that protected accounting records and business files from hardware failure.
- Trained owners and staff on digital tools, file organisation and safe password habits.

PROJECTS

VideoToClips & SongToTube: automated media and transcription pipelines Python · SQLite · FFmpeg

- Built Python pipelines that ingest, preprocess and transcribe audio and video with the OpenAI Whisper API and FFmpeg, exporting structured JSON metadata.
- Wrote millisecond timestamp alignment logic to keep audio segments in sync with the transcript.
- Tracked job state and errors in SQLite (SQLAlchemy ORM) with atomic writes and recovery, so interrupted batches lose no data.

Power Pages Proposal Portal Power Platform · Dataverse

- Built a portal where external contractors submit proposals, upload documents and check review status.
- Designed Dataverse tables, relationships and status fields that keep records organised and prevent orphaned files; wrote FetchXML queries and Liquid templates so each contractor sees only their own submissions.
- Added client-side JavaScript validation for required fields and file formats, cutting down incomplete submissions.

Workflow automation on Linux VMs Ubuntu · n8n · REST APIs

- Configured self-hosted n8n on Ubuntu virtual machines to connect webhooks, database updates and notification alerts, with Bash scripts and CLI wrappers to manage API credentials and rate limits.

Nestly nestlyafrica.cloud

- Property websites for short-stay hosts.

SKILLS

Data analysis: Python (pandas, NumPy), SQL, Excel (data modelling, lookup functions, pivot tables, data validation), statistics, data cleaning, data visualisation

Databases: SQLite, Microsoft Dataverse, SQLAlchemy, Firebase, relational schema design, query optimisation

Platforms: Microsoft Power Platform (Power Apps, Power Pages, Power Automate), Dynamics 365 Business Central (AL), FetchXML

Data quality & AI data: PII masking (GDPR, HIPAA), transcription, speaker diarization, RLHF rubric evaluation

Programming & tools: JavaScript, TypeScript, REST APIs, JSON, Bash, Linux (Ubuntu), n8n, OpenAI Whisper API, FFmpeg

Languages: English (fluent), Swahili (native), German (A2)

EDUCATION

BSc Computer Science Aug 2021 – Apr 2025

Daystar University · Athi River, Kenya

- Coursework: Database Systems, Data Structures & Algorithms, Object-Oriented Programming (Python, C++), Software Engineering, Information Security.
- Capstone: a database-backed web application with user authentication, role-based permissions and dynamic reporting.

Kenya Certificate of Secondary Education (KCSE), Grade B+ 2016 – 2019

Githiga High School · Kiambu, Kenya

CERTIFICATIONS

Introduction to Data and Data Science, 365 Data Science · Nov 2026

Data Analyst Career Track, 365 Data Science · In progress

Supervised Machine Learning: Regression and Classification, DeepLearning.AI & Stanford · Aug 2024

Microsoft Excel Certification: data modelling, lookup functions, pivot tables, spreadsheet automation

Linux Operating System (Foundation), StudySection · Jun 2021
